LET'S TALK ABOUT LAKE MEAD'S LOWERING WATER LEVELS!!!

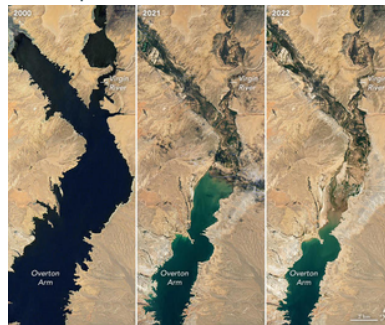

Research suggests conditions are drier now than that have ever been! For at least 1,200 years! This due to the compounded effects of climate change. It is predicted to persist for another decade. Communities across the country are reaping the downfall of less water. Our air quality is declining, and wildfires have seared up acres of land. The drought seems to have reached the peak of concern in recent months when we take a look at the state of Lake Mead.
